NASPA Zyzzyva 3.4.1: What's New

Version 3.4.1 fixes a number of bugs in version 3.4.0. See CHANGES for a brief list of user-visible changes.

Version 3.4.0 extends the mobile app's data-synchronization capability to the desktop application, and adds a wizard to help with sync setup, making it easier to study on multiple devices.

Please note that this version does not support the use of LexLock licenses, which were used to protect lexicons before version 3.2.0. If you need to import encrypted cardbox databases for protected lexicons (OTCWL2014, SSWL2014, OTCWL2016, SSWL2016, CSW15) from versions older than that, you must first run NASPA Zyzzyva 3.2.4 (which still supported LexLock licenses) and do the necessary import of cardbox data. Once that is done, you can quit using that version and move to this current version.
